

CCU

Environmental Policy

January 2019 Edition

I. OBJECTIVES

As part of CCU, the concern for the planet is an integral part of our identity.

On the basis of our Environmental Vision, we recognize the importance of doing business with a long-term approach. Therefore, this objective implies the need to develop and promote among our internal and external stakeholders a culture aimed at minimizing environmental impacts throughout the life cycle of our processes and products, beyond mere regulatory compliance.

We are focused on the continuous improvement of the standards we operate with, also considering the context in which our industry develops and the great challenges faced by society in environmental matters. The statements contained in this document are consistent with local and international principles and best practices to which we adhere, such as the United Nations Global Compact.

II. SCOPE AND RESPONSIBILITY

This Policy applies to all business units, subsidiaries and companies in countries where CCU operates.

III. DESCRIPTION

Considering these commitments, at CCU we promote the following criteria:

- 3.1. Operate rigorously in compliance with applicable environmental laws and regulations, extending this commitment to our suppliers, contractors, partners and strategic allies. A preventive approach will be applied to minimize the potential environmental impacts of our operations when and where regulations do not exist.
- 3.2. Establish an adequate identification, evaluation and management of environmental risks and impacts throughout the supply chain: in our own and third party processes, facilities and operation centers; in the products and services we deliver, as well as in their logistics and distribution.
- 3.3. Consider the following key management objectives: reduce Greenhouse Gas emissions per unit of product, reduce waste generated and increase the recovery of waste that is inevitably generated, and reduce water consumption per unit of product.
- 3.4. Monitor the key objectives mentioned above with specific goals and commitments through our 2030 Environmental Vision, a plan that establishes our short, medium and long-term sustainability path.

- 3.5. Implement standards and management systems that contribute to efficiency and effectiveness in environmental performance, in accordance with best practices.
- 3.6. Implement an energy management system as a tool to continuously improve energy performance, promoting a culture of energy awareness in activities related to energy use and consumption, prioritizing the acquisition of energy-efficient products, services and designs.
- 3.7. Monitor processes and validate results in relation to established standards, management systems, objectives and goals.
- 3.8. Maintain the timely review of environmental matters in merger or acquisition processes and incorporate environmental criteria in the evaluation of suppliers.
- 3.9. Communicate our environmental performance to our stakeholders and work with them in the development of viable solutions to which the Company can contribute.

It is the responsibility of each leader in our Company to assume an active role in the proper dissemination and understanding of this Policy, so that each CCU employee can comply with the established guidelines in the performance of their respective functions.

Likewise, all members of our organization must reflect these commitments in their daily relationship with other stakeholders.
